Holland Batteries to Power Fleet Vehicles

Article By:

Bruce Goodman

XL Hybrids has contracted with [Johnson Controls](#) to supply lithium-ion battery packs for hybrid power trains for light-duty vehicles used by commercial fleets. The ten-person start up provides hybrid electric powertrains for the **Chevrolet Express** and **GMC Savana vans**. The spiral-wound lithium nickel cobalt aluminum cells will have 1.8 KWH of energy storage. The battery pack is being developed at JCI's Holland, Michigan, manufacturing facility. "Purchasing a battery pack manufactured in the USA was an additional bonus as we are committed to supporting domestic production," said Clay Siegert, VP Supply Chain, at XL Hybrids.
