Survey on Carbon-Based Nanomaterials and Analytical Methods Closes November 1, 2024

Article By:

Lynn L. Bergeson

Carla N. Hutton

On October 10, 2024, the European Union (EU) Observatory for Nanomaterials (EUON) [announced](#) that, in collaboration with NovaMechanics, it is [conducting a survey](#) to gather insights on analytical methods for identifying, characterizing, and quantifying carbon-based nanomaterials in various matrices. According to EUON, the initiative “aims to assess the current situation about analytical methods for these types of nanomaterials, whether advanced or more classical nanomaterials.” Responses will go to NovaMechanics for further treatment. The survey will close **November 1, 2024**.
