Diagnosing Health Care Podcast: Advancements of Artificial Intelligence in Health Care – One Year After White House Executive Order – Diagnosing Health Care [Podcast]

Article By:

Lynn Shapiro Snyder

Eleanor T. Chung

Rachel Snyder Good

New from the Diagnosing Health Care Podcast: One year ago, on October 30, 2023, President Joe Biden signed an executive order laying the groundwork both for how federal agencies should responsibly incorporate artificial intelligence (AI) within their workflows and how each agency should regulate the use of AI in the industries it oversees.

What has happened in the past year, and how might things change in the next?

On this episode, Epstein Becker Green attorneys [Lynn Shapiro Snyder](#), [Eleanor Chung](#), and [Rachel Snyder Good](#) reflect on what is new in health care AI as a result of the 2023 executive order and discuss what industry stakeholders should be doing to comply and prepare for future federal regulation of AI in health care.
