GLP Case Studies/Lessons Learned — A Conversation with Lara Hall [Podcast]

Article By:

Lynn L. Bergeson

This week, I welcomed to the studio Lara Hall, Senior Regulatory Scientist/Quality Assurance Specialist at B&C and our consulting affiliate, The Acta Group (Acta®), to discuss a few of the many critical issues associated with chemical testing. Chemical testing is undertaken for lots of reasons: government mandate; product stewardship; and product defense and support, to name a few. What is under-appreciated is the importance of the standards that apply under Good Laboratory Practices (GLP), the expertise needed to address novel testing approaches that deviate from GLP, how to manage requests from regulators that may not align with GLP requirements, and many other scenarios that require the expertise of highly trained and experienced testing experts. In our conversation, Lara shares with our listeners just a few of her many testing experiences that have made Lara the consummate testing expert that she is.
