

Cybersecurity Update — July 2015

Article By:

Dennis A. Cardoza

Chanley T. Howell

James R. Kalyvas

Employees are the front line of your information security defense. While technological protections are essential (for example, antivirus software, firewalls, spam filters, etc.), none are as effective as a vigilant end user. We have created these checklists of measures of which every user should be aware. By sharing them with individuals within your organization, you can dramatically increase not only the security of your systems and data, but the user's own personal computers and data. All too frequently, the security of one can impact the other.

Inside this edition:

- An Individual's Information Security Checklist
- Cyber Insurance: Is Your Business Prepared?
- Insights on Recent Developments
- Negligence Actions Hit UCLA, Sony, and Home Depot Boards
- Plan and Train for Security Incidents Now
- Law Watch: Cybersecurity Legislation That Could Affect Your Business
- Information Security Audits: Precautions and Considerations
