The ***Federal Communications Commission*** unanimously voted at its March 23, 2017, “open meeting” to begin the process for adopting rules allowing carriers to block “spoofed” number calls. These are calls that use a reputable or commonly-known telephone number to mask the actual originating number. The proposed rules would allow carriers to block calls purporting to originate from telephone numbers that (1) are not assigned to a subscriber, (2) are invalid, or (3) are assigned to a subscriber expressly requesting that its number not be spoofed. In his remarks, Chairman Ajit Pai indicated that the proposed rules are needed to target scammers impersonating federal agencies, such as the Internal Revenue Service, and to protect consumers from unwanted solicitations. Commissioner Michael O’Rielly indicated that the proposed rules aim to address illegal “robocalls” in a manner that does not affect legitimate businesses, as opposed to prior efforts to regulate such calls under the Telephone Consumer Protection Act, 47 U.S.C. § 227. The proposed rules and accompanying comments suggest an effort by the now Republican-controlled FCC to issue rules specifically intended to block unwanted robocalls, often from overseas, intended to defraud consumers.

The FCC approved both a Notice of Proposed Rulemaking and a Notice of Inquiry to solicit feedback from consumers and other parties with an interest in the proposed rules. Comments on the proposed rules will be due within forty-five (45) days after publication in the Federal Register. Final rules are unlikely to take effect earlier than late 2017.
